MAYOR OF LONDON

The image displays a collection of logos for various London boroughs, councils, and organizations. The logos are arranged in a grid-like fashion. Key logos include:

- Wandsworth**: The Brighter Borough logo.
- Waltham Forest**: A tree logo.
- Ealing**: A tree logo.
- Brent**: A colorful knot logo.
- Haringey**: A red stylized 'H' logo.
- London Borough of Hounslow**: A purple 'R' logo.
- London Borough of Bexley**: A blue 'B' logo.
- idox**: A blue molecular structure logo.
- Croydon Council**: A purple 'C' logo.
- Barnet London Borough**: A teal 'B' logo.
- Hackney**: A green 'H' logo.
- Havering London Borough**: A black 'H' logo.
- Camden**: A black 'C' logo.
- Harrow Council**: A purple 'H' logo.
- Lambeth**: A grey 'L' logo.
- Hillingdon**: A gold 'H' logo.
- Kingston Upon Thames**: A blue 'K' logo.
- Enfield Council**: A red lion logo.
- Northgate Public Services**: A purple 'N' logo.
- Barking & Dagenham**: A red 'B' logo.
- Agile Applications**: A colorful circle logo.
- Lewisham**: A yellow crown logo.
- Greenwich**: A red 'G' logo.
- Bromley**: A green brushstroke logo.
- Legacy Development Corporation**: A green 'L' logo.
- Sutton**: A red 'S' logo.
- Ministry of Housing, Communities & Local Government**: A royal coat of arms logo.
- OPDC (Old Oak and Park Royal Development Corporation)**: A green 'O' logo.
- Redbridge**: A green leaf logo.
- Atkins**: A black 'A' logo.
- Planning Portal**: A blue 'P' logo.
- Southwark Council**: A teal 'S' logo.
- Meriton**: A black 'M' logo.
- City of Westminster**: A black 'C' logo.
- Tower Hamlets**: A blue 'T' logo.
- Islington**: A black 'I' logo.
- London Borough of Merton**: A black 'M' logo.
- London Borough of Newham**: A pink 'N' logo.
- London Borough of Redbridge**: A green 'R' logo.
- London Borough of Sutton**: A red 'S' logo.
- London Borough of Tower Hamlets**: A blue 'T' logo.
- London Borough of Waltham Forest**: A green 'W' logo.
- London Borough of Westminster**: A black 'W' logo.
- London Borough of Ealing**: A green 'E' logo.
- London Borough of Haringey**: A red 'H' logo.
- London Borough of Hillingdon**: A gold 'H' logo.
- London Borough of Kingston Upon Thames**: A blue 'K' logo.
- London Borough of Lambeth**: A grey 'L' logo.
- London Borough of Merton**: A black 'M' logo.
- London Borough of Newham**: A pink 'N' logo.
- London Borough of Redbridge**: A green 'R' logo.
- London Borough of Sutton**: A red 'S' logo.
- London Borough of Tower Hamlets**: A blue 'T' logo.
- London Borough of Waltham Forest**: A green 'W' logo.
- London Borough of Westminster**: A black 'W' logo.

How it works

What Type of Data are we Collecting?

[planning_london_datahub_questions_nov20.pdf](#)

Broadly:

1. Data about the development proposed (including floorspace, bedroom numbers, parking spaces etc)
2. Predicted impacts of the development (infrastructure requirements, when they are planning to start etc)
3. Data about the planning application (Processing, conditions, decisions etc)

Who is using the data?

Thames Water

The System Planning Portal

We have an internal GIS platform that holds a plethora of internal and external spatial data.

- It is currently only for wastewater assets (not yet clean water)
- It is meant to show all GIS data in one place so that you don't have to open 3 or 4 different GIS applications to look at different datasets for the same location
- It has a small userbase of about 70 staff
- It holds some confidential customer sensitive data (like flood records and future flood risk predictions)
- It is almost 1 year old
- It has over 150 data layers in and we keep finding more we think need to be added

- How it works:
- We use ArcGIS Enterprise
 - The data is held within our Azure Platform (using our Data Lake and Data Factory)
 - Some data is automatically updated by existing business processes (many automated)
 - Some data we need to sporadically re-run other DST's and update the data accordingly

- Corporate data:
- Sewer records
 - Network maintenance activities

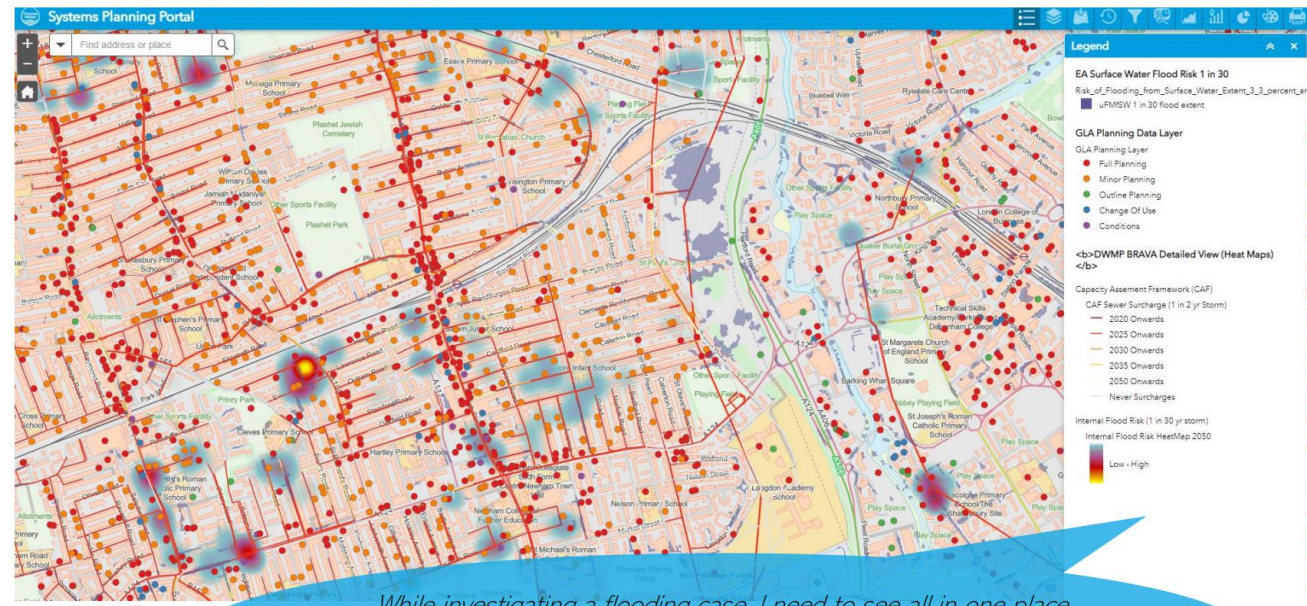

- Bespoke Planning data:
- Future flood risk
 - Critical Asset location and risk

- Project outputs data:
- Sewer gradient data
 - Sewer infiltration risk data

- External data:
- Many EA data layers (gov.uk)
 - CAMELLIA Water Data Explorer GIS layers

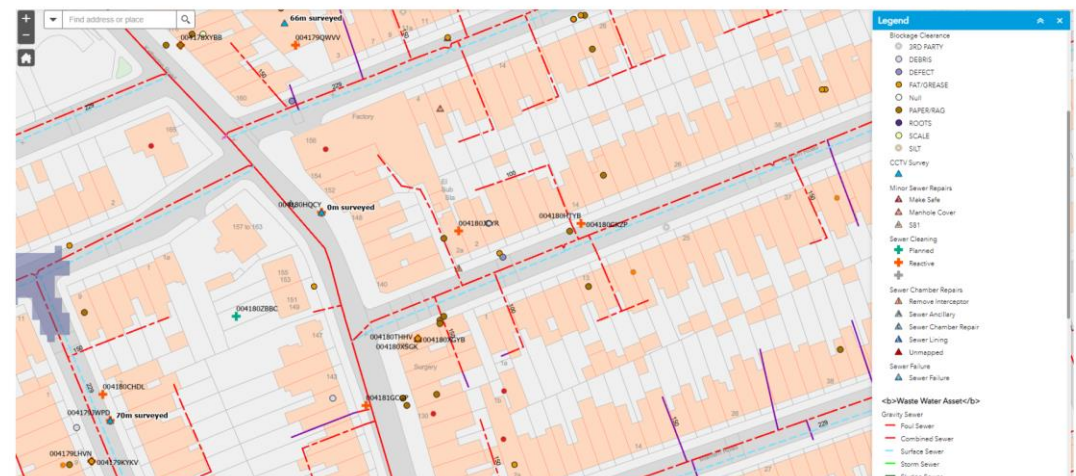

- GLA Interaction:
- Thames Connect - IMA
 - PLD

PLD and future risk

While investigating a flooding case, I need to see all in one place the (i) reported flood history, (ii) future flood risk (iii) EA fluvial and surface water maps & (iv) operational activity in the area

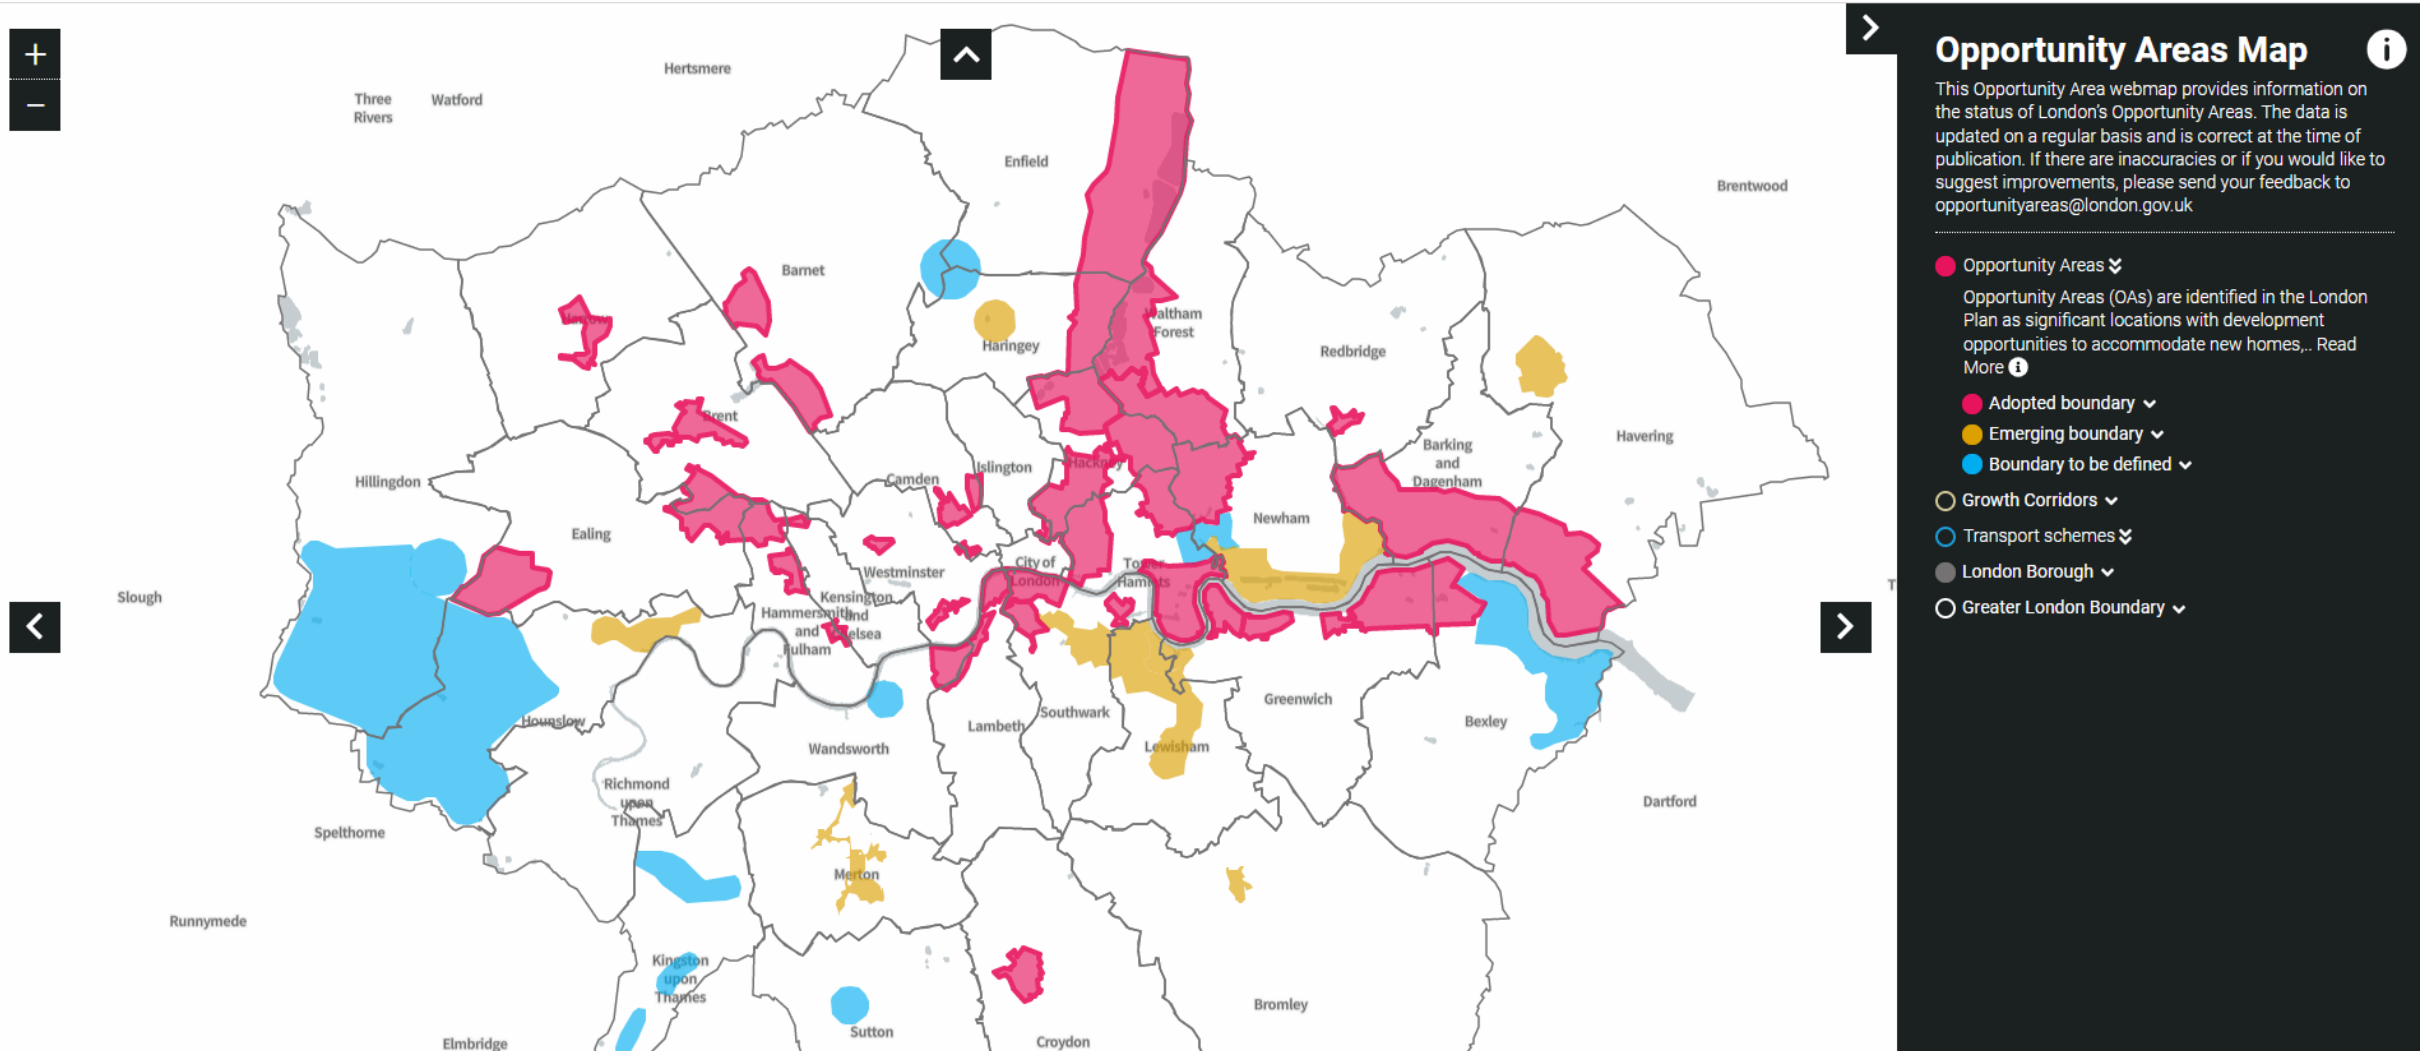

PLD and Operational Performance data

Who is using the data?

Development Plan Monitoring

MAYOR OF LONDON

SHLAA +

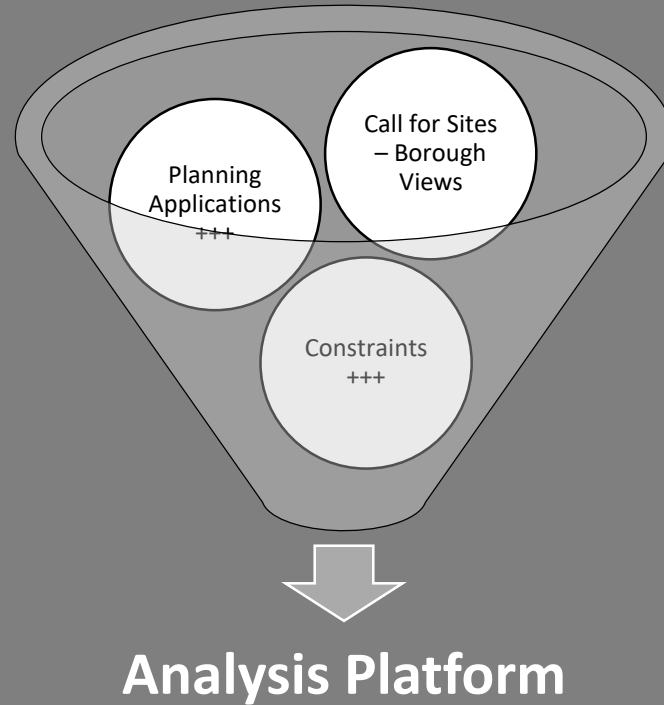

A single digital platform for London that enables Planners to project where future development could take place and understand better where development need could be met, this is both for commercial and residential development.

Key Points:

- Collaborative tool that enables different users to apply different assumptions to sites
- Shared platform for call for sites
- Rolling program, enabling a live understanding of available development land across London
- Shared agreement on data requirements and analytical processes
- Shared position on accessibility, transparency and usability of data / outcomes

Project Launch – December 2022

Target Live Beta Launch – Summer 2023

Key Milestones to Watch Out for

1. Procuring a digital partner for the projects
2. Single Call for sites platform for boroughs to host on their own websites
3. Workshops on User Experience
4. Discussion around Transparency of Data
5. Availability of new data sets
6. Exploration of how projects like this are incentivised and funded
